

Opti Cleaner

Modernize your washing routines

Washing robot for aviary systems

The Opti Cleaner is an automated washing robot adapted for aviary systems. Based on more than 25 years of proven wash robot technology, it is built for demanding livestock environments and helps reduce manual labor, improve washing efficiency and support higher biosecurity standards.

Efficient washing

Washing aviary systems is time-consuming and physically demanding. The Opti Cleaner helps automate large parts of the process, allowing staff to focus on preparation, inspection, and final details. A modern way to increase the farm productivity.

Adaptive

The Opti Cleaner is equipped with specially designed side wheels that can be adjusted in height. These wheels allow the robot to take support from the aviary system and maintain a steady path along the aviary system. With joystick programming, the wash patterns can be adapted to your house and washing needs, covering key areas such as the aviary system, ceiling, floors, and walls.

Wide coverage with low water consumption

The Opti Cleaner uses a rotor nozzle that delivers a wide and effective spray pattern with strong impact against dirt. This allows the robot to wash large areas efficiently and provides a reliable washing process.

With a water consumption of only 17 litres per minute, the Opti Cleaner provides powerful washing performance while keeping water use low.
